

Beautiful Everblooming Cannas Are Easy to Grow

The Canna is probably the most popular flower to be found in the American flower garden because it produces flowers in many different colors as large as ten inches in diameter, set well ahead of large, broad tropical green and bronze colored foliage, depending on the variety. Canna bulbs that are planted in the spring provide beautiful plants that bloom continuously from early July until frost. Cannas can be grown successfully in all parts of the nation. The flower garden is not complete unless it has Cannas.

Canna Culture

Cannas make beautiful flowers that bloom the entire summer and fall. Plant the tubers in well prepared soil, four or five inches deep and 18 inches apart in early spring. After frost, cover canna beds with straw, or dig bulbs and store inside.

When storing inside, remove stalks, do not break the clumps apart. Leave soil attached. Separate in spring at planting time.

HORN CANNA FARM

The Horn Canna Farm started on a shoestring and an idea in 1931. It has grown until today it covers the United States and many foreign countries.

Our future business depends upon your satisfaction. We want your future business, and the only way we can expect to deserve it is by giving our personal attention to every order.

Sincere personal service has built a nationwide business. We attribute our growth to the fact that we have considered every order a sacred trust between us and the final purchaser.

To produce and ship millions of cannas each year, our equipment consists of 10,000 feet irrigation pipe and three deep water wells capable of 1000 GPM each. Over 500 acres of land, six tractors, six transportation vehicles, thirty farm implements, including a four row canna bulb planting machine, six warehouses with total of 127,000 cubic feet of storage space, air conditioned and freeze proof. The canna farm is operated on a modern basis to offer you the best in Cannas at lowest possible price.

We employ twenty-five workmen experienced in growing, harvesting and shipping Canna Bulbs.

EVERY BULB YOU BUY FROM HORN CANNA FARM IS GUARANTEED TO GIVE COMPLETE SATISFACTION OR EVERY CENT OF YOUR MONEY WILL BE REFUNDED!

YOU ARE ASSURED OF TOP QUALITY AND COMPLETE SATISFACTION WHEN YOU BUY
YOUR CANNA BULBS FROM

The Worlds Largest Canna Farm

GRADING OF CANNAS - No. 1, 2, 3,

Each Canna plant produces three different sizes of bulbs - large, medium and small. We have found it very satisfactory to offer a choice of the size wanted, and priced accordingly, eliminating large and small bulbs in the same box at the Number 1 price. The Number 2 and Number 3 bulbs grow and produce full size plants and flowers soon after planting just the same as the Number 1 bulbs. All three grades are fresh, hand trimmed bulbs that grow to full maturity and bloom by mid-summer this year.

NOTE - Dwarf, medium and tall are descriptive of the height of the varieties. The dwarf grows approximately two feet high, medium approximately three feet high, and tall approximately four feet high. Height of the different varieties may vary slightly either way, depending on richness of soil, moisture and length of the growing season. Description is based on average growing conditions.

WARRANTY

We exercise the greatest possible care to send only stock that should perform entirely satisfactorily, nevertheless we give no warranty as to purity, quality or description of any stock we ship, and will not be responsible for the crop. If purchaser does not accept stock on these terms, shipment must be returned in five days after receipt. Our liability in such case is limited to purchase price only.

REMARKS IN GENERAL

We apologize for not having enough bulbs for all our regular customers in 1953-54. In 1953 we experienced a very poor stand due to one or more causes that we have now eliminated, and we hope to maintain a large supply of stock such as we now have, and add to it in the future, with no more failures. Our President Canna stock is limited this year, but for 1957 and thereafter we plan to have as many President bulbs as all other varieties combined.

We grow cannas in strips of 12 rows each, rows spaced 40 inches apart, canna hills spaced 18 inches apart. Each strip is separated by a 12-foot strip of alfalfa. The alfalfa strip is used for driveway to make roguing of cannas practical. 100% growing inspection - sprinkler irrigation line moving by tractor - crop rotation - variety separation - insect spraying and harvesting more efficient. Sight seeing tours arranged.

All cannas are removed from field in October each year, stored inside of modern, freeze-proof buildings with dirt left on clumps to assure full size, fresh bulbs as needed. This method prevents water logged, partly frozen and dried up bulbs. Our average rainfall is 30 inches per year. We are 1130 feet above sea level. With our capable irrigation system we can control our moisture conditions to an advantage.

Our canna fields are plowed and worked each year between plantings and a 100% new crop is produced each year. Storage houses are cleaned and disinfected as often as necessary to prevent disease and storage house rot.
